Ref: Request for Stormwater Guidance

Dear Supervisor Storck,

September 23,2021

MVCCA's Special Committee on Stormwater is working to provide solutions to stormwater issues Mount Vernon District residents are experiencing. The committee's focus is (1) fixing existing stormwater issues, (2) intervening in proposed and on-going projects to prevent problems, and (3) pursuing changes in laws, ordinances, and regulations to prevent stormwater issues in the future. To date we have identified and toured residential sites with stormwater problems; engaged independent subject matter experts to assess those sites; and met with State and County Staff to explore their approaches to stormwater management.

At that meeting, County Staff advised that guidance is being developed to address stormwater issues related to infill development. As attention to new construction is a key component of our focus area (2) above, the committee asked to review the guidance before it is approved and issued. Staff agreed to provide the draft.

As of this date we have not received the proposed guidance. We are asking you to ensure that the committee has the opportunity to review and comment on the proposed guidance before it is formally issued.

We appreciate your help with this.

Sincerely,

Katherine Ward
